METHOD FOR FEATURE TRANSFER IN A TELECOMMUNICATION NETWORK

Abstract of the Disclosure

5

A network (30) of a telecommunication system (100) receives requests (31) for feature transfers from one user (10) to another user (20). In addition, network initiated feature transfer marks a call agent (61) for

10   feature transfer. Subsequent call attempts from a call agent (51) are redirected (63) by the network.
